WORK EXPERIENCE

- **Undergraduate Research Intern, UTLLab** 2026.2 – current
  - Conducted multiple researches on MLLM Safety
- **Undergraduate Research Intern, DMSLab** 2025.3 – 2025.12
  - Conducted multiple researches on Deep Reinforcement Learning, Large Language Models
- **Co-Founder at Lett, Own Business** 2023.10 – 2024.10
  - Founded Team Lett, challenging tech entrepreneurship across apps and web services.

PROJECTS

- **Can you trust Frontier Editing Models? — KT MM Safety**

  - Designed and conducted cross-generator evaluations of synthetic-video detectors across unseen editing models, compression, VAE reconstruction, and diverse editing concepts.

  - Evaluated ForgeLens, DeCoF, ReStraV, and VideoVeritas, revealing weak unseen-editor generalization and lower detectability for motion edits; multi-editor training improved ForgeLens TPR@5% FPR from 0.467 to 0.732 under a fixed data budget.

  - Investigated detection failures across editing types and video editors through multi-seed evaluation and per-video analysis.

- **Multimodal Safety GuardRail — KT MM Safety**

  - Developed an evaluation framework for multimodal guardrail models, benchmarking over-refusal and joint image–text robustness while identifying systematic text bias in safety reasoning.

  - Constructed balanced multimodal reasoning data and tested lightweight inference-time safety prompts; the best image–text-focused prompt improved overall accuracy from 67.74% to 77.05
  - Investigated detection failures across editing types and video editors through multi-seed evaluation and per-video analysis.

- **Inkly : AI-based handwriting refinement Application**

- Inkly is an AI-based handwriting refinement platform that analyzes handwritten input and generates improved handwriting while preserving the writer's personal style.
- The project explores style-conditioned handwriting generation using diffusion-based generative models, integrated into a full-stack mobile-to-server system.

- **Pzzk: A Clean, Serverless iOS Calendar**

- officially launched the iOS application PZZK, designed with the concept of "the simplest calendar in the world." contribution of Calendar was enabling iCloud synchronization without using a server.
- Pzzk Github

EDUCATION

- **B.S. in Computer Science and Engineering, Konkuk University** 2021.3 – 2027.02 (expected)
  - Major GPA : 4.24/4.5

SKILLS

languages	Python, SQL
Frameworks	Pytorch, React, Django
Tools	Git, Docker

Certifications

- **TOEIC** Overall Score: 865

- **OPIC** Overall Score: IM2
